I'm taking that as a compliment....

:)

I know this is terrible, but....

Federal Facilities Branch (SFD 8-1)

Maybe should be:

Federal Facilities Branch (SFD 8-1)

Just a guess, but I think the concern is a 1 degree change in temp over course of day could be a stressor on the bugs that are present in that location. I suspect they realize that EBR won't be effective in the SEE treatment area because it is too hot, that's why they are focusing on the perimeter. And if they do significant extraction, the temperature redistribution will kill off the bugs that are present.
